

Following issues / problems that came to Development Team raised for Data Correction Module are submitted herewith along with the Solution

Regards
Vishram Chowsalkar

Clarifications / issues handled in Data Correction Module

1. Blank Khata Numbers

Problem : It is observed that in few records there are no khata numbers assigned for Khata Register entries and also on names on 7/12.

Solution : Use the durusti option number 11 "Niorank Khate Kramank Durust Karne"

2. Ahwal-2 (7/12 va 8A madhil farak)

Problem : It is observed that there are 7/12 and 8A area does not match even after village processing. This is due to numeric_pin is not having either value 0 or a different value. Also it is observed that there are duplicate records in table for names on 7/12 (form7 khata table)

Solution 1 : Pin and Numeric Pin having problem) : Pl refer this issue to help desk

Solution 2 : Use the application "Delete Duplicates" which will be given to you only in case there is an issue, Pl call Help Desk to get this application

3. Audit Tables and related database objects are not created

Problem : It is observed 1-2 tahsils have reported non creation of audit tables. This was not checked in earlier version. Now ver 1.1 gives list of all such not created database objects. Now ver 1.1 list such missing objects.

Solution : Script for this is attached and called as "check_audit.txt" which needs to be executed on occurrence of such message when running Correction, Updation & Crop Modules.

4. Ahwal-10 (Sola Anne hun jast aslele survey kramank)

Problem : The earlier correction version used to check 16 anne or more for every khata number and survey number combination, which was not correct. New version checks it per survey number wise.

Solution : Re-generate the Ahwal-10 and confirm for blankness

5. Ahwal-5 – 7/12 va khata register madhil nava madhe farak

Problem : Its is observed that there are entries in khata register and 7/12 where there are missing names in either side, mismatch in names, bracketed / non bracketed mismatches etc

Solution : Use Option-4 of Record Durusti chya Suvidha

Following cases are covered and as per manual record one needs to do correction using above option

Case	Remarks	Name in Khata Register	Is entry bracketed	Name in 7/12	Is entry bracketed
------	---------	------------------------	--------------------	--------------	--------------------

1	Difference in names	XYZ	No	XYZ1	No
2	Difference in names	XYZ	Yes	XYZ	No
3	Difference in names	XYZ	No	XYZ	Yes
4	Difference in names	XYZ	No	MISSING NAME	Yes

Solution : New version allows to change khata type for those khata numbers where survey numbers did not exist for that khata.

6. Khata Type change

Problem : In the earlier correction version, Could not change khata type for those khata numbers where survey numbers did not exist for that khata.

Solution : New version allows to change khata type for those khata numbers where survey numbers did not exist for that khata.

7. Duplicate entries for Village Names, Khatedar Names, Other Rights, etc

Problem : Due to multiple execution of Scripts during data conversion, it could happen that there are duplicate entries in one or more tables which are seen during various stages of data correction module / data updation module.

Solution : Use the application "Delete Duplicates" which will be given to you only in case there is an issue, Pl call Help Desk to get this application

8. Ver1.1 Login Page Error : Log outs and gives Data Error "DB Objects table is not available"

Problem : Due to non creation of db_objects table, after login software immediately logs out.

Solution : Restore backup of db_objects given in scripts folder of current 1,1 version available on 154 server.

9. Data Error for 1-K

Problem : A stored procedure is not present / is missing

Solution : Run the script for data correction-crop current scripts folder for the SP_GET_CURRENT_DATE
